GitHub Stats

• Student – Vijay Shankar

• Mentor – Aditya

• Short Description – GitHub Stats is a mobile app based on flutter to show you statistics of different GitHub profiles

• Full Description – The App allows you to search users based on their username and displays the search result to top 5 relevant users in real time based on search query, it allows you to tap on search results and view the profile and graphs plotted based on different user repo details of individuals. The App also has a profile page which shows your details when you log in with your GitHub account.

• My Experience – It helped me to learn flutter and collaborate with other people on GitHub, and work as a team with others, and to know me more about structured programming, State Management and how to work with packages and API.
