PROJECT HARLEQUIN

Student name: DEBASISH MISHRA

Mentor name: PARWIN AKHTARI

Basically our project is a blog website where anyone can come and create his/her account and post their blogs online where anyone can comment. It also has advertisement section along with it.

Basically I focused on frontend part of website by using html, css, Javascript, Aos(Js), bootsrap. I have created the cards portion for go live page which contains some animations and then I added some changes in navbar. I worked on the footer section and made it responsive and made some changes in the designing part. Then I created the full post page where I added a comment section with the help of Javascript in order to add some animation on click and also I did the part where when we scroll down the page a section come out from the left side which has comment and follow button for which I used Aos library. Also I did some other changes which you can look on my github repository.

So for me it was a wonderful experience I really enjoyed working with my teammates and mentor they were really helpful so I would love to participate in these kind of hackathons again (would be better if get same team mates and mentor) but really it was really useful experience I got to know a lot of new thing by working together and it also improved my technical skills. This was my first time I have ever participated in winter of code or any event like this as I am a first year student and by these experience I look forward to participate in more such events so thank you IIIT Kalyani for organizing this wonderful event.
